Summary

Calm and aspiring software developer with 3+ years of non-commercial software development experience. Able to develop solutions for a wide variety of areas, such as web front-ends, writing business logic, working with low-level systems, etc. Currently studying at 42 School at Rome, and looking for a company to join and grow with.

Experience

Talent Plus SRLS

January 2018 to August 2018

Contract seller

Viterbo, Pescara, Italy

- Efficiently advertised the services of our company to the public.
- Sold dozens of contracts per month, providing the company a decent monthly influx of new clients.
- Tutored newcomer peers into becoming efficient contract sellers themselves.

Projects

Unix shell re-implementation | C

- Written as an implementation of minishell 42 project. Description of minishell: <https://github.com/JaeSeoKim/42cursus/blob/master/pdf/en.subject-Minishell.pdf>
- Implemented a lexer-parser-interpreter pipeline for the execution of user-provided input.
- Built an interpreter based on a Abstract-Syntax-Tree walking technique.
- Implemented various Unix builtins, such as cd, echo, pwd, export, set, unset and env.
- Project link: https://github.com/saraGasperini70/projects_backup/tree/main/minishell

Raycasted maze-traversal game | C

- Written as an implementation of cub3d 42 project. Description of cub3d: <https://github.com/frozenrobot/42-Cub3d/blob/master/cub3d-subject.pdf>
- Implemented textured raycasting with Digital Differential Analysis algorithm.
- Game performs data parsing to verify the validity of the level prior to running it.
- Used miniLibX for handling windowing and input events.
- Worked in a collaborative environment with my peer.
- Project link: https://github.com/saraGasperini70/projects_backup/tree/main/cub3d

Simple web server | C++98

- Written as an implementation of *webserv* from 42 School.
- Written with C++98, utilizing only std library.
- Studied *nginx* as a reference implementation.
- Implemented file uploading through forms and PUT HTTP calls.
- Performed crucial research of CGI functionality specification, necessary for successful completion of the project.
- Tested CGI support implementation, verified with a few Python and Lua CGI scripts.
- Due to a few limitations of this project (such as mandatory use of C++98, and inability to use 3rd party libraries), I have implemented a hand-rolled implementation of certain C++03 features to allow safer memory management patterns and cleaner code appearance (namely shared/unique pointers and optional values).
- Helped to achieve 100% availability rate when testing with [siege](#).
- Worked in a collaborative environment with my peers.
- Project link: <https://github.com/IgorGRBR/webserv>

Skills

-
- Low-level Linux development with C and C++
 - Back-end development with Flask and NextJS
 - Front-end development with React, NextJS, Tailwind
 - Scripting with Python and Node
 - Use of project and team management tools (Github)
 - Basic Agile familiarity
 - Knowledge of imperative and object-oriented programming paradigms, as well as various software development techniques and design patterns
 - Usage experience of Windows & Unix-based systems
 - Fast learner and a team player
 - Excellent verbal and written communication
 - Experience of communicating and working with non-technical clients
 - Native Italian speaker with excellent knowledge of English (certified as B1). Knowledge of French and German at B1 level. Knowledge of Polish and Japanese at A2 level

Education and Training

42 School. Software Engineering Bootcamp. Rome, Italy.	2023 to Current
La Sapienza University. Unfinished History, Religions and Anthropology degree. Rome, Italy.	2019 to 2022
Tuscia University. Unfinished Cultural Organization degree. Viterbo, Italy.	2012 to 2016
Language Studies High School. Successfully graduated. Final grade: 87/100 Bassano, Italy.	2006 to 2011
